ΕN

This symbol indicates instructions or notes regarding safety, to which special attention must be paid.

This symbol indicates useful information for the correct functioning of the product.

Factory settings

## 1. General safety precautions

#### Failure to observe the information given in this manual may lead to personal injury or damage to the equipment. Keep these instructions for future reference

This installation manual is intended for qualified personnel only.

Installation, electrical connections and adjustments must be performed in accordance with Good Working Methods and in compliance with the present standards.

This product must only be used for the specific purpose for which it was designed.

Any other use is to be considered improper and therefore dangerous. The manufacturer cannot be held responsible for any damage caused by improper, incorrect or unreasonable use.

Read the instructions carefully before installing the product. Incorrect installation could be dangerous.

The packaging materials (plastic, polystyrene, etc.) should not be discarded in the environment or left within reach of children, as they are a potential source of danger.

Before installing the product, make sure it is in perfect condition.

Do not install the product in explosive areas and atmospheres: the presence of inflammable gas or fumes represents a serious safety hazard.

The safety devices (photocells, safety edges, emergency stops, etc.) must be installed taking into account the applicable laws and directives, Good Working Methods, installation premises, system operating logic and the forces developed by the automation. Before connecting the power supply, make sure the plate data correspond to those of the mains power supply. An omnipolar disconnection switch with a contact opening distance of at least 3mm must be fitted on the mains supply.

Check that there is an adequate residual current circuit breaker and a suitable overcurrent cut-out upstream of the electrical installation in accordance with Good Working Methods and with the laws in force.

When requested, connect the automation to an effective earthing system that complies with current safety standards.

During installation, maintenance and repair operations, cut off the power supply before opening the cover to access the electrical parts.

The electronic parts must be handled using earthed antistatic conductive arms. The manufacturer of the motorisation device declines all responsibility if com-

ponent parts not compatible with safe and correct operation are fitted.

Only use original spare parts when repairing or replacing products.

#### 1.1 Safety functions

The CS12E control panel has the following safety functions:

- obstacle recognition with force limiting;

The maximum response time of the safety functions is 0.5 s. The reaction time to a faulty safety function is 0.5 s.

The safety functions comply with the standards and performance level indicated below:

EN ISO 13849-1:2008 Category 2 PL=c EN ISO 13849-2:2012

The safety function cannot be bypassed either temporarily or automatically. Fault exclusion has not been applied.

## 2. EC Declaration of Conformity

The manufacturer Entrematic Group AB, with headquarters in Lodjursgatan 10, SE-261 44 Landskrona, Sweden, declares that the Ditec CS12E type control panel complies with the conditions of the following EC directives:

2014/30/EU (EMCD) 2014/35/EU (LVD) 2014/53/EU (RED)

Landskrona, 2020-11-26

# 3. Technical specifications

Description	NES400EH	NES600EH	NES600EHSF
Power supply	230V~ 50/60Hz	230V~ 50/60Hz	230V~ 50/60Hz
Motor output	24V 🛲 14A max	24V 🛲 16A max	24V 🛲 16A max
Accessories power supply	24V 🛲 0,3A max	24V 🛲 0,3A max	24V 🛲 0,3A max
Operating temperature	-20 °C +55 °C	-20 °C +55 °C	-20 °C +55 °C
Storable radio codes	100 200 [BIXMR2]	100 200 [BIXMR2]	100 200 [BIXMR2]
Radio frequency	433,92MHz	433,92MHz	433,92MHz

**NOTE**: The given operating and performance features can only be guaranteed with the use of DITEC accessories and safety devices.

IP2162EN

## 4. Commands

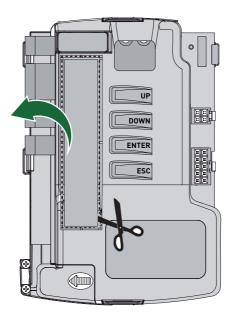

Command		Function	Description
1 5	NO	STEP-BY-STEP WITH AUTOMATIC CLOSING	When selecting $\mathcal{B} \longrightarrow \mathcal{L} \to \mathcal{L} \to \mathcal{L} \to \mathcal{L}$ , closing the contact starts a sequential opening or closing operation: opening-stop-closing-opening. WARNING: if automatic closing is enabled, the duration of the stop can be selected by selecting $\mathcal{B} \longrightarrow \mathcal{L} \to \mathcal{L}$
		STEP-BY-STEP WITHOUT AUTOMATIC CLOSING	When selecting $\mathbb{B} \subseteq \mathcal{F} \subseteq \mathcal{F} \to \mathcal{F}$ , closing the contact starts a sequential opening or closing operation: opening-stop-closing-opening.
		OPENING WITH AUTOMATIC CLOSING	When selecting $\mathbb{B} \cap \mathbb{C} \to \mathbb{C} \to \mathbb{C}$ , closing the contact activates an opening operation.
		OPENING WITHOUT AUTOMATIC CLOSING	When selecting $\mathbb{B} \subseteq \mathcal{F} \subseteq \mathcal{F} \to \mathcal{F}$ , closing the contact activates an opening operation. <b>NOTE</b> : Once the automation stops, command 1-5 performs the opposite operation to the one performed before the stop.
1 <u>    t</u> 6	NC	CLOSING SAFETY DEVICE	When selecting $\mathbb{B}[\rightarrow 6 4 \rightarrow 1 \cdot 6]$ , opening of the safety contact stops and prevents any movement. <b>NOTE</b> : to set different safety contact functions, see the $\mathbb{P}P \rightarrow \mathbb{S}M$ parameter settings.
1 6	NO	CLOSING	When selecting $\mathbf{B} \subset \rightarrow 6 \lor 4 \rightarrow 1 \cdot \lor 4$ , closing the contact activates a closing operation.
1 8	NC	CLOSING SAFETY DEVICE	Opening the safety contact triggers a reversal of the movement (reopening) during the closing operation. When selecting $\mathbb{B} \cap \mathbb{C} \to \mathbb{C} \cap \mathbb{N}$ , with the automation idle, opening of the contact prevents any operation. When selecting $\mathbb{B} \cap \mathbb{C} \to \mathbb{C} \cap \mathbb{C}$ , with the automation idle, opening of the contact only prevents closing.

ΕN

#### 4.1 Inserting plug-in card (AUX)

To access the plug-in card (AUX), cut the control panel cover as shown in the figure.

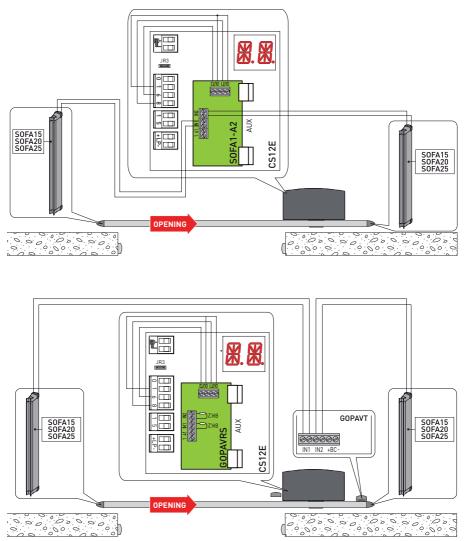

4.2 SOFA1-SOFA2 or GOPAVRS self-controlled safety edge

Command	Command		Description
SOFA1-SOFA2 GOPAV		SAFETY TEST	Place the SOFA1-SOFA2 or GOPAVRS device into the special housing for AUX plug-in cards. If the test fails, an alarm message appears on the display.
1 <u>     t                               </u>	NC	SAFETY STOP	When selecting $PP \rightarrow JG \rightarrow S$ 4. connect the output contact of the safety device to terminals 1-6 on the control panel (in series with the photocell output contact, if installed).
1 <u>    t    </u> 8	NC	CLOSING SAFETY DEVICE	When selecting $\square P \rightarrow \square B \rightarrow 5$ 4/, connect the output contact of the safety device to terminals 1-8 on the control panel (in series with the photocell output contact, if installed).

ΕN

#### Examples of installation of self-controlled safety edge

IP2162EN

# 5. Outputs and accessories

Output	Value Accessories	Description
	24V <del></del> 0.3 A	Accessories power supply. External accessories power supply output. <b>NOTE</b> : the maximum absorption of 0.3 A corresponds to the sum of all terminals 1.
	GOL148REA (433, 92 MHz)	Antenna connection (433, 92 MHz). If the inside radio receiver is used, connect the supplied antenna wire (173 mm), or alternatively the GOL148REA antenna, using a coaxial cable, type RG58.
+LP-	FL24 FLM 24V <del></del> 25 W	Flashing light. The pre-flashing settings can be selected from the third level menu $\mathbb{P} \to \mathbb{W}$ and/or $\mathbb{P} \to \mathbb{W}$ .
AUX		The control panel has a housing for plug-in cards. The action of the card can be selected by selecting $\mathbb{B} \longrightarrow \mathbb{R}^m$ . WARNING: the plug-in cards must be inserted and removed with the power supply disconnected.
СОМ	BIXMR2	This allows the functioning configurations to be saved using the function $SF \rightarrow SV$ . The saved configurations can be recalled using the function $SF \rightarrow RE$ . The storage module allows the remote controls to be stored. If the control panel is replaced, the storage module being used can be inserted in the new control panel. <b>WARNING</b> : the storage module must be inserted and re- moved with the power supply disconnected.
	NES100FCM	Magnetic limit switch kit (optional only for Ditec NES400).
EE BAT	SBU 2x12 V 2Ah	<ul> <li>BAT - Batteries functioning.</li> <li>The batteries are kept charged when the power supply is on. If the power supply is off, the panel is powered by the batteries until the power is re-establish or until the battery voltage drops below the safety threshold. The panel turns off in the last case.</li> <li>WARNING: the batteries must always be connected to the con- trol panel for charging. Periodically check the efficiency of the batteries.</li> <li>NOTE: the operating temperature of the rechargeable batteries is approximately +5°C/+40°C.</li> </ul>
		Mains power supply, motor, release microswitch and automa- tion wiring connection.

## 6. Selections

Jumper	Description	OFF	ON
JR1	Display mode selection.	Display mode. Only the values and pa- rameters present can be displayed.	Maintenance mode. Only the values and parameters pre- sent can be displayed and modified. Going into maintenance mode is indi- cated by the permanent switching on of the right-hand point on the display.
JR3	Built-in radio receiver.	Disabled.	Enabled.

## 7. Settings

Some parameters of the NeoS SUPERFAST have been limited for functional safety reasons (given the maximum reachable speed). For special needs, contact technical assistance.

**NOTE**: pressure on the keys can be quick (less than 2 s) or prolonged (longer than 2 s). Unless specified otherwise, quick pressure is intended.

**NOTE**: depending on the type of automation and control panel, some menus may not be available.

#### 7.1 Switching the display on and off

The procedure to switch on the display is as follows:

ENTER

- press the ENTER key
- the display functioning check starts

• the first level menu is displayed

The procedure to switch off the display is as follows:

• press the ESC key

**NOTE**: the display switches off automatically after 60 s of inactivity.

IP2162EN

#### 7.2 Key combinations

- Simultaneous pressing of the keys  $\uparrow {\rm and}$  ENTER performs an opening command.

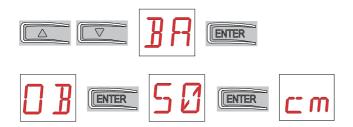

• Simultaneous pressing of the keys  $\downarrow$  and ENTER performs a closing command.

• Simultaneous pressing of the keys  $\uparrow$  and  $\downarrow$  performs a POWER RESET command. (interruption of the power supply and restart of the automation).

- Keeping press the UP  $\uparrow$  or DOWN  $\downarrow$  key, fast menu scrolling begin. To stop menu scrolling.
- In some menus, the parameter unit of measurement can be displayed by pressing the ENTER key once the value has been displayed (in the example, 50 cm).

EN

#### 7.3 Main menu

- using keys  $\uparrow$  and  $\downarrow$  select the desired function

• press the ENTER key to confirm

After confirming the selection, you access the second level menu.

Display	Description
RT	<b>AT - Automatic Configurations.</b> The menu allows you to manage the automatic configurations of the control panel.
BC	<b>BC - Basic Configurations.</b> The menu allows you to display and modify the main settings of the control panel.
BR	<ul> <li>BA - Basic Adjustments.</li> <li>The menu allows you to display and modify the main adjustments of the control panel.</li> <li>NOTE: some settings require at least three operations before they are set correctly.</li> </ul>
RD	<b>RO - Radio Operations.</b> The menu allows you to manage the radio operations of the control panel.
5F	<b>SF - Special Functions.</b> The menu allows you to set the password and manage the special functions in the control panel.
	<b>CC - Cycles Counter.</b> The menu allows you to display the number of operations carried out by the automation and manage the maintenance interventions.
RP	<ul> <li>AP - Advanced Parameters.</li> <li>The menu allows you to display and modify the advanced settings and adjustments of the control panel.</li> <li>NOTE: some settings require at least three operations before they are set correctly.</li> </ul>

**WARNING**: make adjustments gradually and only after performing at least three complete operations to allow the control panel to be set correctly and detect any friction during operations.

## 8. Display visualisation mode

**NOTE**: depending on the type of automation and control panel, some menus may not be available.

8.1 Display of automation status

The automation status display mode is only visible with Display visualisation mode set to 02.

## $\texttt{AP} \rightarrow \texttt{J} \texttt{S} \rightarrow \texttt{O2}$

Display	Description
ΓΞ	Automation closed.
L.I	Automation closed. Release door open.
	Automation open.
. 1	Automation open. Release door open.
Γ	Automation stopped in intermediate position.
<u> </u>	Automation stopped in intermediate position. Release door open.
1 1	Automation closing.
1	Automation that slows down during closing.
1 1	Automation opening.
	Automation that slows down during opening.

31

Display	Description
_ ]	Automation closed.
	Automation closed. Release door open.
1	Automation open.
1.	Automation open. Release door open.
]	Automation stopped in intermediate position.
].	Automation stopped in intermediate position. Release door open.
0 0	Automation closing.
4	Automation that slows down during closing.
1 1	Automation opening.
1	Automation that slows down during opening.

#### 8.2 Display of safety devices and commands

i

The safety device and command display mode is only visible with Display visualisation mode set to 01 or 03.

# $\begin{array}{c} \mathsf{AP} \rightarrow \texttt{]} \ \texttt{S} \rightarrow \texttt{0} \ \texttt{1} \\ \mathsf{AP} \rightarrow \texttt{]} \ \texttt{S} \rightarrow \texttt{0} \ \texttt{3} \end{array}$

Display	Description
I- 3	1-3 - Opening command.
1-4	1-4 - Closing command.
1-5	1-5 - Step-by-step command.
1-6	1-6 - Safety device with opening and closing stop.
1-8	1-8 - Safety with closing reversal.
P 3	P3 - Partial opening command.
3P	3P - Opening command with operator present.
ЧР	4P - Closing command with operator present.
R X	RX - Radio reception (of any memorised key of a transmitter present in the memory).
N×	NX - Radio reception (of any non-memorised key).
Ε×	EX - Rolling-code radio reception out of sequence
EP	EP - Radio reception not complying with the parameter configuration $\mathbb{R} \square \rightarrow \mathbb{E} \mathbb{P}$
[ ×	CX - Receipt of command from AUX card.

F 1	F1 - Closing limit switch
F 2	F2 - Opening limit switch
	01 - Detection of an obstacle during closing
50	O2 - Detection of an obstacle during opening
	00 - Reaching of obstacle detection limit during opening
	OC - Reaching of obstacle detection limit during closing
51	S1 - Detection of stop during closing
52	S2 - Detection of stop during opening
<u>5</u> W	SW - Release door open.         When the release door is closed, the control panel performs a RESET (alarm X).         It is possible to ignore the reset by holding down the ESC & DOWN keys for 3 seconds until the SW stops flashing.         If the RESET is disabled, make sure not to move the gate manually.         NOTE: If you return to the menu, the reset is reactivated.
RV	RV - Enabling/disabling of built-in radio receiver via JR3.
MQ	MQ - Learning operation of mechanical end stops in progress.
НŢ	HT - Heating of the motors (NIO function) in progress.
יי רל	hr - Indicates OPERATOR PRESENT mode (hold to run).
1 ل	J1 - Variation of the JR1 jumper status.

IP2162EN

#### 8.3 Display of alarms and faults

Alarms and faults can be displayed with any display selection. The signalling of alarm messages takes priority over all other displays.

Type of alarm	Display	Description	Operation			
	MØ	M0 - Selected motor not suitable.	Set correct motor wiring.			
	MB	M3 - Automation blocked (open/closed)	Check the mechanical parts			
	MH	M4 - Motor short circuit	Check the motor is correctly con- nected.			
			Check the motor is working properly.			
	MB	M8 - Gate too long error (>25 m)	Check the rack / chain belt			
Mechanical alarm	M9	M9 - Gate too short error (< 200 mm)	Manually check that the door wing moves freely.			
	MB	MB - Absence of motor during an op- eration.	Check connection of motor. Check motor brush contacts. If the problem persists, contact Tech- nical Support.			
	MJ	MD - Irregular functioning of motor opening limit switch.	Check connection of the motor open- ing limit switch.			
	ME	ME - Irregular functioning of motor closing limit switch.	Check connection of the motor closing limit switch.			
	MI	MI - Detection of fifth consecutive ob- stacle.	Check for the presence of permanent obstacles along the stroke of the automation.			
	ML	ML - Inverted limit switches	Check the positioning and connection of the limit switches. Also check the motor connection.			
Power supply operations alarm	RØ	R0 - Insertion of a storage module con- taining over 100 stored remote controls. WARNING: R 0 → MU → 20 is set au- tomatically. The alarm is displayed 3 times only.	To save the system configurations on the storage module, delete any stored remote controls and bring the total to less than 100. Set $\mathbb{R}  \bigcirc \rightarrow \mathbb{M}  \bigcup \rightarrow \mathbb{1}  \bigcirc$ .			

Type of alarm	Display	Description	Operation			
supply is alarm	RJ	R3 - Storage module not detected (with JR3=ON).	Insert a working storage module or set JR3=0FF.			
Power supply operations alarm	RS	R5 - Storage module not working (re- gardless of JR3)	Replace the storage module.			
		A0 - Failure of test of safety sensor on contact 6.	Check that device SOFA1-A2/GOPAV is working correctly.			
L L	HIJ		If the supplementary card is not inserted, check that ]] 6 is not set to 5 4// P 4/			
ries ala		A3 - Failure of test of safety sensor on contact 8.	Check that device SOFA1-A2/GOPAV is working correctly.			
Accessories alarm	F- F-1		If the supplementary card is not inserted, check that $\mathbf{D} = \mathbf{i} \cdot \mathbf{s} \cdot \mathbf{s} \cdot \mathbf{i} \cdot \mathbf{s} \cdot $			
	89	A9 - Flashing light output short circuit alarm	Check that the flashing light is working properly.			
Power supply alarm	P 1	P1 - Microswitch voltage too low	Check the control panel is powered correctly.			
	I7	17 - Internal parameter outside limits error	Reset. If the problem persists, contact Tech- nical Support.			
	I8	18 - Program sequence error	Reset. If the problem persists, contact Tech- nical Support.			
Control panel nternal alarm	IA	IA - Internal parameter error (EE- PROM)	Reset. If the problem persists, contact Tech- nical Support.			
Cor	IB	IB - Internal parameter error (RAM)	Reset. If the problem persists, contact Tech- nical Support.			
	IC	IC - Operation time out error (>5 min or >7 min in acquisition mode)	Manually check that the door wing moves freely. If the problem persists, contact Tech- nical Support.			
	ΙH	IH - Overcurrent with motor switched off alarm	Reset. If the problem persists, contact Tech- nical Support.			

Type of alarm	Display	Description	Operation
Control panel internal alarm	IM	IM - Shortcircuited motor MOSFET alarm	Reset. If the problem persists, contact Tech- nical Support.
	ID	10 - Interrupted power circuit (motor MOSFET open)	Reset. If the problem persists, contact Tech- nical Support.
	IR	IR- Motor relay malfunctioning	Reset. If the problem persists, contact Tech- nical Support.
	XX	Firmware reset (SIGNAL ONLY)	
Service	l' []	V0 - Request for maintenance interven- tion	Proceed with the scheduled mainte- nance intervention.

(EN)

## 9. Start-up

#### NeoS SUPERFAST

Pay attention to the adjustment of the slowdown spaces and braking times! Make adjustments gradually, and only after having completed at least three complete maneuvers, to allow the control panel to calibrate correctly and detect any friction during maneuvers.

- 1- Make a jumper for NC safety contacts.
- 2- Adjust the opening and closing stop limit switches, if any. NOTE: The limit switches must remain pressed until the operation is completed and placed as shown in the Ditec NeoS installation manual.
- 3- Set the desired opening direction from the 🖪 T menu.
- 4- Manually move the sliding gate and make sure the entire stroke slides evenly and without friction.
- 5- Switch on and check the automation is operating correctly with the subsequent opening and closing commands (see paragraph 7.2).

Check that the limit switches are activated if used.

#### WARNING

The operations are performed without safety devices.

The display parameters can only be adjusted when the automation is idle.

The automation automatically slows when approaching the end stops or stop limit switches. At every start-up the control panel receives a RESET and the first operation is performed at reduced speed (automation position acquisition).

- 6- Connect the safety devices ]] [] and ]] []  $\Rightarrow$  5 4] (removing the relative jumpers) and check they are working correctly.
- 7- To modify the operation and deceleration speed settings, automatic closing times and thrust on obstacles, consult the menus.
- 8- Connect any other accessories and check they are functioning.
   WARNING: Ensure that the forces exerted by the door wings are compliant with EN12453-EN12445 regulations.
- 9- If required, store the remote controls using command  $\mathbb{R} \square \rightarrow \mathbb{S} \mathbb{R}$ .
- 10- Once the start-up and check procedures are completed, close the container.

**NOTE**: in the event of servicing or if the control panel is to be replaced, repeat the start-up procedure.

## 10. Troubleshooting

Problem	Possible cause	Alarm signalling	Operation
The automation does not open or close.	No power.		Check power supply cable.
	Short circuited accessories.		Disconnect all accessories from terminals 0-1 (a voltage of 24V= must be present) and reconnect them one at a time. Contact Technical Service
	Blown line fuse.		Replace fuse.
	Safety contacts are open.	- 6  - 8	Check that the safety contacts are closed correctly (NC).
	Safety contacts not correctly connected or self-controlled safety edge not functioning correctly.	A0 A3 I-6 I-8	Check connections to terminals 6-8 on control panel and con- nections to the self-controlled safety edge.
	SAFETY SWITCH release mi- croswitch open.	SM	Check that the hatch is closed correctly and the microswitch makes contact.
	Photocells activated.	- 6  - 8	Check that the photocells are clean and operating correctly.
	The automatic closing does not work.		Issue any command. If the problem persists, contact Technical Service
	Mechanical fault	EM	Check the rack or transmis- sion chain, and/or the me- chanical parts.
	Faulty motor	МЧ МЭ	Check motor connection, if the problem persists, contact Technical Service.
	Faulty control panel	I TO I TO I TO I TO I TO I R	Contact Technical Service.
The external safety devices are not activated.	Incorrect connections be- tween the photocells and the control panel.		Check that $I \cdot 5 / I \cdot 8$ is displayed Connect NC safety contacts together in series and remove any jumpers on the control panel terminal board. Check the $PP \rightarrow ]B$ and $PP \rightarrow ]B$ setting

The automation opens/clos- es briefly and then stops.	There is a presence of friction.	M9 IC MI	Manually check that the auto- mation moves freely and check the $\bigcirc$ 1/ $\bigcirc$ adjustment Contact Technical Service
The remote control has lim- ited range and does not work with the automation moving.	The radio transmission is impeded by metal structures and reinforced concrete walls.		Install the antenna outside.
			Replace the transmitter bat- teries.
The remote control does not work	No storage module or incor- rect storage module.	RØ RJ RS	Switch the automation off and plug in the correct storage module.
			Check the correct memorisa- tion of the transmitters on the built-in radio. If there is a fault with the radio receiver that is built into the control panel, the remote control codes can be read by removing the storage module.
The flashing light is not working	Bulb burnt or flashing light wires detached or short-cir-cuited.	89	Check the bulb and/or wires. Contact Technical Service

## 11. Examples of sliding gate applications

- set the correct opening direction:

Example 1 - Door wing stops against mechanical end stops (standard setting) Set

📧 🖙 A P Gree 🖾 🖙 F A Gree N 🛛 Gree 🧃	IK
	]K)

Example 2 - Door wing stops against limit switches (setting with standard limit switches installed)

Connect the limit switches to the terminal	
Set	
	]
	]

With these settings, if an obstacle is detected while opening, the door wing stops and performs a disengagement operation whereas during a closing operation, the door wing reopens.

K

Example 3 - Door wing stops against mechanical end stops and reverses motion if an obstacle is detected

Conne	ect the li	mit sv	vitches	s to th	ne termi	nal				
Set						l				
		7 P 🛛	ENTER	Δ		<sup>-</sup> R		) X	ENTER	0ĸ
		790	ENTER	Δ		Ē	ENTER	X	ENTER	0K
1	<i>c</i> ·									

In this configuration, the door wing stops against its respective mechanical closing and opening end stop. In the event of obstacle detection before the activation of the proximity limit switch while opening, the door wing stops, performing a disengagement operation; after the proximity limit switch is activated, the door wing stops against the obstacle.

In the event of obstacle detection during closing and before the activation of the proximity limit switch, the door wing reopens; after the proximity limit switch is activated, the door wing stops against the obstacle.
